Abstract

The “Global climate scheme” (a global carbon price funding a global basic income) would be an effective and progressive way to combat climate change and poverty. Yet, such policy is mostly absent from political platforms and the policy debate. Using surveys on 40,000 respondents in 20 countries covering 72% of global CO₂ emissions, we document majority support for this and other global policies. Using a complementary survey on 3,000 U.S. respondents, we test several hypotheses that could reconcile strong stated support with a lack of salience of these issues. The complementary analyses show that the stated support is mostly sincere, although we cannot rule out insincerity for 3% to 9% of the population from the willingness to sign a real-stake petition and a list experiment, respectively. Global redistributive policies rank high (though not highest) in the prioritization of policies. Conjoint analyses reveal that the Democratic party would not significantly lose votes if it endorsed the global climate scheme, while a candidate at the Democratic primary would actually win votes by doing so. Accurate beliefs about the level of support for the scheme dismisses the hypothesis of pluralistic ignorance of the support. Strong universalistic attitudes are confirmed in more general questions, suggesting that the support cannot be explained away by malleable opinion or experimenter demand. Finally, we conclude that there is no compelling reason why global policies do not enter the public debate or political platforms, as they seem genuinely supported by a majority of the population.

We are grateful for financial support from the University of Amsterdam and TU Berlin. We thank Antoine Dechezleprêtre, Tobias Kruse, Bluebery Planterose, Ana Sanchez Chico, and Stefanie Stantcheva for their invaluable inputs for the project. We thank Auriane Meilland for feedback. We thank Laura Schepp, Martín Fernández-Sánchez, Samuel Gervais, Samuel Haddad, and Guadalupe Manzo for assistance in the translation.

1 Introduction

Extreme poverty and climate change are among the most critical issues of our time. The first could be solved by redistributive transfers, the second by capping global emissions. A fair and effective policy to tackle these two problems is the “Global climate scheme” (GCS), which combines these two solutions. The GCS consists of a global cap-and-trade system, where emission rights are auctioned each year to polluting firms, and of a global basic income, funded by the auction revenues.

In this paper, we study attitudes toward global policies that address climate change, global poverty or inequalities, with a focus on the GCS. Using an international survey on climate attitudes, we document majority support for global policies like the GCS in 20 among the largest countries. Yet, such global policies are nowhere to be seen in policy debates. Why? To explain this paradox (absence of the policy despite majority stated support), we run a complementary survey on 3,000 U.S. respondents and test different hypotheses: insincerity of support for the GCS, pluralistic ignorance (i.e. false belief that most do not support it), defavorable electoral outcomes for a candidate that would support it, or low priority given to global issues. Furthermore, we also study attitudes toward other global policies, global redistribution, and universalistic values.

2 Results

2.1 Data

We measure stated support for different global policies using a survey on climate attitudes conducted in 2021 on 40,680 respondents from 20 countries covering 72% of global CO₂ emissions (the questions of this survey on climate attitudes national policies are analysed in another paper¹). We then conduct a representative survey on 3,000 U.S. respondents to study in detail the sincerity and rationales behind the support for the GCS, the attitudes toward various global policies, global redistribution, and universalistic values.

2.2 Global support

The global survey shows strong support for climate policies at the global level (Figure 1). When asked “At which level(s) do you think public policies to tackle climate change need to be put in place?”, 70% (in the U.S.) to 94% (in Japan) choose the global level.

Meanwhile, the European level is chosen by less than half of the European respondents while the federal level is chosen by only 52% of U.S. respondents. More local levels are generally chosen less than broader ones. This preference for the global level is consistent with (at least) two of the three key motives to support climate policies identified in the literature:^{1,2,4} effectiveness and fairness (the third being self-interest).

Several global policies obtain an absolute majority support in all countries: “a tax on all millionaires in dollars around the world to finance low-income countries that comply with international standards regarding climate action [which] would finance infrastructure and public services such as access to drinking water, healthcare, and education”, “a global democratic assembly whose role would be to draft international treaties against climate change [where] each adult across the world would have one vote to elect members of the assembly” (though this one receives only 48% of support in the U.S.), and an international emission trading scheme where “countries that emit more than their national share would pay a fee to countries that emit less than their share”. In high-income countries, this global quota obtains 64% of absolute (i.e. *somewhat* or *strong*) support and 84% of relative support (i.e. excluding *indifferent* answers). The support is even higher in middle-

income countries, though one should interpret the results with caution in middle-income countries as their samples are only representative of the online population (young, graduated and urban people are over-represented). After the support for the global quota, we ask how the carbon budget should be divided among countries. The preferred burden-sharing rule is to allocate the rights to emit on an equal per capita basis: this fairness principle secures an absolute majority support in all countries, and a relative majority support never below 84%. Taking into account historical responsibilities and vulnerability to climate damages is also popular, though less consensual, while grand-fathering (i.e. allocating emission shares in proportion to current emissions) comes last everywhere. The Global climate scheme, i.e. a global quota where emission rights are allocated on an equal per capita basis, has the same distributive effects as a global carbon tax that would fund a global basic income. We also test the support for this policy, but here we specify to the respondents the distributive effects: that it would lift the 700 million people who earn less than \$2/day out of extreme poverty, and that the typical person in their country would lose a certain amount (that we specify) due to the price increases. Despite their similarity, the global tax is less supported than the global quota, and it even fails to obtain a majority in Anglo-saxon countries. This lower support is likely due to the fact that distributive effects are made salient in the case of the tax, an interpretation that is consistent with the level of support for the global quota once we make the distributive effects salient, which we do in the complementary surveys.

2.3 Stated support for various policies

2.3.1 Global climate scheme

In the complementary U.S. survey, we describe the Global climate scheme, explain its distributive effects (specifying the amounts at stake), test the understanding that typical people would lose in high-income countries and that the poorest humans would win using an incentivized question, and then give the correct answer. We proceed the same way for a National redistribution scheme (NR) that would tax the top 5% to finance cash transfers offsetting the monetary loss of the GCS for the median emitter, expecting people to find out at the comprehension question that the richest would lose and the typical people in their country would win. Then, we display summaries of the schemes' description to make sure that the respondents remember them. Right after, we ask again incentivized question of comprehension, and latter give the expected answer that a typical fellow citi-

Figure 2: Support for various global policies in the U.S. ($n = 3,000$).

zen would neither win nor lose with the GCS and NR combined. Finally, we directly ask the support for the GCS and for NR in simple *Yes/No*: the stated support for each is at 54% ($n = 3,000$).

2.3.2 Other global policies

We also test support for other global policies (Figure 2). All receive relative majority support but two: “a maximum wealth limit of \$10 billion” and the “cancellation of low-income countries’ public debt”. Climate-related policies are particularly popular: “high-income countries funding renewable energy in low-income countries” obtains absolute majority support while loss and damages compensation (which was approved at the COP27) receives a relative support of 57%.

2.3.3 Foreign aid

After explaining that “0.4% of U.S. government spending (that is, 0.2% of U.S. GDP) is spent on foreign aid to reduce poverty in low-income countries”, less than 20% state that U.S. foreign aid should be reduced while 57% state that it should be increased, including 14% who support an unconditional increase. To the 43% who answer that aid should be increased but only if some conditions are respected, we later ask them what condition(s) should be required. The three conditions most chosen are all largely respected by the

Global climate scheme: “that we can be sure the aid reaches people in need and money is not diverted” (chosen by 74%), “that recipient countries comply with climate targets and human rights” (59%), and “that other high-income countries also increase their foreign aid” (44%). On the other side, not wishing to increase their country’s foreign aid is mostly justified by prioritizing one’s fellow citizens or viewing each country as responsible for its own fate.

2.4 Sincerity of support

We use several methods to assess the sincerity of the support for the Global climate scheme: a list experiment, a real-stake petition, conjoint analyses, and the prioritization of policies. All methods suggest that the support is either completely sincere, or the share of insincere answers is limited.

2.4.1 List experiment

The tacit support for the GCS measured through the list experiment is 46%, i.e. 8 p.p. lower than at the direct question. This may be the sign of a social norm pushing some people to state that they support the GCS although they secretly do not. Still, if there is a social norm in favor of the GCS, there is a similar norm in favor of the National redistribution scheme, as the gap between the tacit and direct support for it is comparable (at 7 p.p.).

2.4.2 Petition

When told that “we will send the results to the U.S. President’s office, informing him what share of American people are willing to endorse the Global climate scheme”, 4 p.p. fewer people are willing to sign a petition for the GCS than to simply state their support. For the National redistribution scheme, the proportion of support is not significantly different in the petition and in the simple question.

2.4.3 Conjoint analyses

In our *conjoint analyses*, we ask respondents to make five choices between pairs of political platforms. The first conjoint analysis suggests that the GCS is supported for itself, independently of being complemented by a national climate policy (“Coal exit”, denoted

Table 1: Number of supported policies in the list experiment in function of the composition of the list. *G* stands for the Global climate scheme and *R* for the National redistribution scheme ($n = 3,000$).

	Number of supported policies

R^2	0.111

C) or the National redistribution scheme. Indeed, 55% of ($n = 3,000$) respondents prefer the combination of C, NR and the GCS to the combination of C and NR alone, indicating a similar support for the GCS conditional on NR and C than for the GCS alone. For the second analysis, we split the sample into four random branches. Results from the first branch show that 55% ($n = 750$) prefer the combination of C, NR and the GCS to NR alone. The second shows that the support for the GCS conditional on NR, at 59% ($n = 750$), is somewhat higher than the direct support for the GCS. The third, that the support for C conditional on NR is even higher, at 63% ($n = 750$). This is confirmed by the fourth, showing that 52% ($n = 750$) prefer C to the GCS, both conditional on NR. In other words, there is majority support for the GCS and for C, slightly more people prefer C but C does not act as a substitute for the GCS, and some people find the GCS complementary to NR though the number of people requiring NR to support the GCS remains small.

The third analysis suggests that a Democratic candidate would not significantly lose voting share at the 2024 presidential election if he or she were to endorse the GCS. To estimate this, we present to two random branches of the sample hypothetical Democratic and Republican platforms that differ only by the presence (or not) of the GCS in the Democratic platform. Although the share of respondents choosing “None of them” is slightly higher (at 13% instead of 11%) when the Democratic platform includes the GCS, the share choosing the Democrat is not significantly lower (52% in both cases).

Our last two analyses is run on the subsample of non-Republicans ($n = 2,000$), i.e. the

respondents who choose *Democrat*, *Independent*, *Non-Affiliated* or *Other* for their political affiliation. We frame the choice between two platforms as a hypothetical duel at the 2024 Democratic primary and force the respondents to choose between candidate A or B. In the fourth analysis, a policy (or an absence of policy) is randomly drawn for each platform in each of five categories: *economic issues*, *societal issues*, *climate policy*, *tax system*, *foreign policy* (Figure 11). Except for the category *foreign policy*, which features the GCS 42% of the time, the policies are prominent progressive policies and they are drawn uniformly. When a platform features the GCS and not the other, the one with the GCS is chosen 53% (which is significantly more than half) of the time ($n = 3,000$). The fifth analysis draws random Democratic platforms in a similar ways, except that candidate A's platform always contains the GCS while candidate B includes no foreign policy. In this case, 61% of respondents choose A ($n = 3,000$). In short, our conjoint analyses indicate that a candidate at the Democratic primary would have more chances to obtain the nomination by endorsing the GCS, and this endorsement would not penalize her or him at the presidential election. This result reminds the finding that 12% of Germans shift their voting intention from SPD and CDU/CSU to the Greens and the Left when they are told that the latter parties support global democracy.³

At the end of the survey, we pick six policies at random (and uniformly) among the progressive policies used in the last conjoint analyses, and ask respondents to allocate 100 points (using sliders) among them, with the instruction that “the more you give points to a policy, the more you support it”. For each policy presented, the average support is thus 16.67 points (Figure 4). The GCS ranks in the middle of all policies (9th. out of 17), with an average number of points of 15.3 which is only slightly lower than average. It is higher than to “ban the sale of new combustion-engine cars by 2030” (13.4) and “coal exit” (10.0), but lower than the third climate policy: “trillion dollar investment in clean transportation infrastructure and building insulation” (20.3). The support for other globally redistributive policies is variable: “Doubling foreign aid” is the least supported policy (8.4), while the “Global tax on millionaires” is one of the five policies with more than 20 points (20.2), and the “global democratic assembly on climate change” is just below the GCS (14.5). The most supported policies are “Funding affordable housing” (28.5), “\$15 minimum wage” (23.8), and “Universal childcare/pre-K” (22.1).

Figure 3: Conjoint analysis (asked only to non-Republicans). Average Marginal Component Effects (relative to the baseline: an absence of policy of that category) of policies in the choice of candidate for a hypothetical duel in the 2024 Democratic primary, where both platforms are randomly drawn ($n = 2,000$).

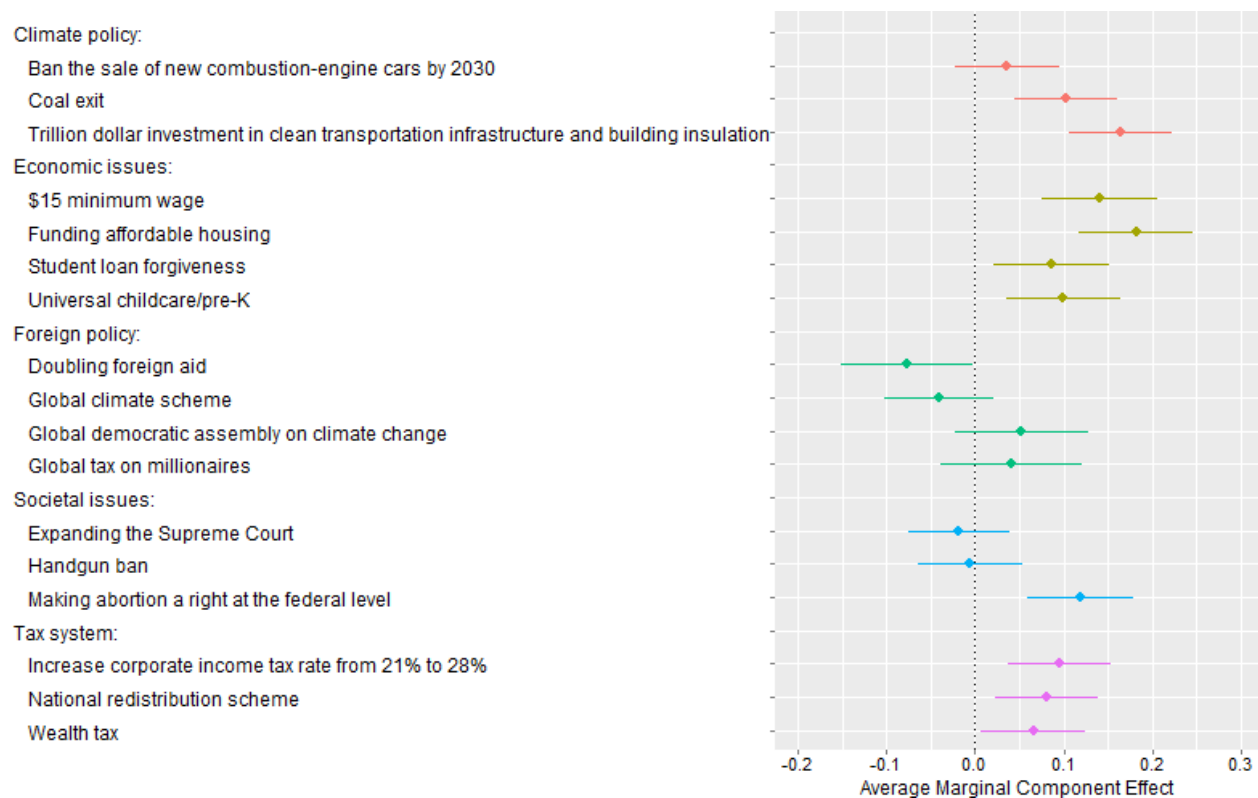

Figure 4: Prioritization of policies. Each respondent faces six policies taken at random from the ones below and allocates 100 points among them to signal the strength of their support for each one ($n = 3,000$).

2.5 Second-order beliefs

To explain a strong support for the GCS despite its absence from political platforms and the public debate, we hypothesized pluralistic ignorance, i.e. that most people and policy-makers wrongly perceive the GCS as unpopular. People would then hide their support for such globally redistributive policies, knowing that advocating for them would be vain. We do not find any evidence of pluralistic ignorance in an incentivized question on the perceived support. On the contrary, people have quite accurate beliefs regarding the level of support for the GCS. Indeed, the mean (resp. quartiles) perceived support is 52.0% (resp. 36, 53, 69%, $n = 1,500$) vs. an actual support of 53%. For the record, the second-order beliefs are equally accurate for the National redistribution scheme, with mean (resp. quartiles) perceived support of 54.7% (resp. 40, 55, 71%, $n = 1,500$) vs. 56%.

2.6 Universalistic values

We ask broad question on people's values, to see whether their core values are consistent with universalism. Asked what group they defend when they vote ($n = 3,000$), 19% choose "sentient beings (humans and animals)", 25% "humans", 34% "Americans", 15% "My family and myself", and the rest (7%) choose another group (mostly "My State or region" or "People sharing my culture or religion"). The first two categories can be described as universalist, and they represent close to one out of two people. The share of universalist even constitutes a majority (at 51%) of non-Republicans. When asked what should U.S. diplomats defend in international climate negotiations, only 14% prefer "U.S. interests, even if it goes against global justice"; 25% prefer global justice (mitigated or not by U.S. interests) and the bulk of respondents (37%) prefer "U.S. interests, to the extent it respects global justice" ($n = 3,000$). Finally, when asked to judge the extent to which climate change, global poverty and U.S. inequality are an issue, climate change is generally viewed as the biggest problem (with a mean of 0.40 once we recode answers between -2 and 2), followed by global poverty (0.20) and U.S. inequality (0.19, $n = 3,000$). Overall, answers to these broad value questions are consistent with half of Americans supporting global policies like the GCS, as people find that global issues are among the biggest problems, almost half of them are universalist when they vote, and most of them wish that U.S. diplomats take into account global justice.

3 Discussion

In 20 among the largest countries, we find strong majority support for global climate policies, even in high-income countries that would financially lose from the globally redistributive policies that we test. The complementary survey in the U.S. confirms these results. For example, there is a strong support for global taxes on the wealthiest, and majority support for our flagship policy, a Global climate scheme that would establish both carbon pricing at the global level through an emission trading system, and a global basic income funded by its revenues. A list experiment and a real-stake petition show that the support for the GCS is mostly sincere. This genuine support is confirmed by the prioritization of this global climate policy above some prominent national climate policies, and consistent with around half of the population holding universalistic (rather than nationalistic or egoistic) values. Moreover, the conjoint analyses reveals that a Democratic candidate should not lose voting shares by endorsing the GCS, and would even win votes at the Democratic primary by doing so. Besides a potential lack of sincerity and weak opinions, we dismiss another hypothesis to explain the scarcity of global policies in the public debate despite a strong support: that people underestimate the support of their fellow citizens. As we ruled out all our pre-registered hypotheses, we now need to formulate new hypotheses.

We see four potential explanations for the scarce mention of globally redistributive policies in the public debate. Among the new hypotheses, the first two are variations of pluralistic ignorance, and the last two represent complementary (rather than substitute) explanations. First, there may be pluralistic ignorance of universalistic values, of the support for the GCS, or of the electoral advantage of endorsing it *among policy makers*. We intend to test this hypothesis by running a survey on Congress staffers and Members of the European Parliament. Second, there may be a more subtle form of pluralistic ignorance: although people correctly predict what people would answer to a survey question, they may view globally redistributive policies as unrealistic, perhaps because they have never reflected upon the fact that many people across the world hold universalistic values and are supportive of global solidarity. Third, most people and perhaps even most policy makers may have simply never heard of the GCS, let alone built their political ideas upon it. The ignorance of the GCS itself seems supported by the feedback fields, where the most common answer is a variation upon “thank you for this interesting, thought-provoking survey”. Fourth, most institutions are national: the largest scale votes take place at the national level, most media target a national audience, most commentators frame their dis-

course from a national perspective, and relations to foreign countries as conflictual. The prominence of national institutions may create a nationalistic bias in political thoughts, silencing the universalistic values of people.

In any case, if any (or several) of the remaining hypotheses is confirmed by evidence, we could draw the same conclusion. There is a strong support for global policies that address climate change and global inequality, even in high-income countries, and the frontier of what is considered politically realistic might soon shift on this issue. Uncovering evidence for this might actually contribute itself to garner more attention to global policies in the public debate and political platforms.

B Questionnaire of the first U.S. complementary survey

1. Welcome to this survey!

This survey is **anonymous** and is conducted **for research** purposes on a representative sample of 3,000 American people.

It takes **10 to 15 min** to complete.

The survey contains lotteries and awards for those who get the correct answer to some understanding questions.

If you are attentive and lucky, **you can win up to \$350** in points. (See **terms and conditions**).

Please answer every question carefully.

Do you agree to participate in the survey?

Yes; No

2. What is your gender?

Woman; Man; Other

3. How old are you?

Below 18; 18 to 20; 21 to 24; 25 to 29; 30 to 34; 35 to 39; 40 to 44; 45 to 49; 50 to 54; 55 to 59; 60 to 64; 65 to 69; 70 to 74; 75 to 79; 80 to 84; 85 to 89; 90 to 99; 100 or above

4. What is your ZIP code?

5. Do you live with your partner (if you have one)?

Yes; No

6. How many people are in your household? The household includes: you, the members of your family who live with you, and your dependants.

1; 2; 3; 4; 5 or more

7. What race or ethnicity do you identify with? (Multiple answers are possible)

White; Black or African American; Hispanic; Asian; American Indian or Alaskan Native; Native Hawaiian or Pacific Islander; Other: {open field}; Prefer not to say

8. What is the *annual* gross income of your household (before withholding tax)? This includes all income: wages, self-employment earnings, Social Security benefits, pensions, investment income, welfare payments, and income from other sources.

Less than \$20,000; between \$20,001 and \$35,000; between \$35,001 and \$42,000; between \$42,001 and \$50,000; between \$50,001 and \$65,000; between \$65,001 and \$82,000; between \$82,001 and \$103,000; between \$103,001 and \$130,000; between \$130,001 and \$145,000; between \$145,001 and \$165,000; between \$165,001 and \$250,000; More than \$250,000; I prefer not to answer

9. What is the highest level of education you have completed?

Primary school or less; Eighth grade; Some high school; Regular high school diploma/GED or alternative credential; Some college, no degree; 2-year college degree or associates degree (for example: AA, AS); Bachelor's degree (for example: BA, BS); Master's degree or above (MA, MS, MEng, MEd, MSW, MBA, MD, DDS, DVM, LLB, JD, PhD);

10. What is your employment status?

Full-time employed; Part-time employed; Self-employed; Student; Retired; Unemployed (searching for a job); Inactive (not searching for a job)

11. Are you a homeowner or a tenant? (Multiple answers are possible)

Tenant; Owner; Landlord renting out property; Hosted free of charge

12. [Asked if lives with partner] What is the estimated value of your household's assets (in U.S. dollars)?

Include here all your possessions (home, car, savings, etc.) net of debt. For example, if you own a house worth \$300,000 and you have \$100,000 left to repay on your mortgage, your assets are \$200,000.

I estimate my household's assets net of debt to be:

Less than \$0 (I have a net debt); Close to \$0; Between \$4,000 and \$120,000; Between \$120,000 and \$380,000; More than \$380,000

13. [Asked if does not live with partner] What is the estimated value of your assets (in U.S. dollars)?

Include here all your possessions (home, car, savings, etc.) net of debt. For example, if you own a house worth \$300,000 and you have \$100,000 left to repay on your mortgage, your assets are \$200,000.

I estimate my assets net of debt to be:

Less than \$0 (I have a net debt); Close to \$0; Between \$4,000 and \$60,000; Between \$60,000 and \$190,000; More than \$190,000

14. What do you consider to be your political affiliation, as of today?

Republican; Democrat; Independent; Other; Non-Affiliated

Global climate scheme

15. In the following, we describe two policies, on which we will survey your opinion.

To check that you have attentively read the descriptions, **we will ask some understanding questions afterwards: those who get correct answers can win up to \$150.**

Global climate scheme: At the Paris agreement in 2015, all countries have agreed to contain global warming "well below +2 °C". To limit global warming to this level, **there is a maximum amount of greenhouse gases we can emit globally.**

To meet the climate target, a limited number of permits to emit greenhouse gases can be created globally. Polluting firms would be required to buy permits to cover their emissions. Such a policy would **make fossil fuel companies pay** for their emissions and progressively raise the price of fossil fuels. **Higher prices would encourage people and companies to use less fossil fuels, reducing greenhouse gas emissions.**

In accordance with the principle that each human has an equal right to pollute, the revenues generated by the sale of permits could finance a global basic income. **Each adult in the world would receive \$30/month**, thereby lifting out of extreme poverty the 700 million people who earn less than \$2/day.

The typical American would lose out financially \$85 per month (as he or she would face \$115 per month in price increases, which is higher than the \$30 they would receive). The policy could be put in place as soon as countries totaling more than 60% of global emissions agree on it. Countries that would refuse to take part in the policy could face sanctions (like tariffs) from the rest of the World and would

be excluded from the basic income.

16. Who would win or lose financially in the Global climate scheme?

Three respondents with the expected answer will get \$50 in points.

Typical Americans would win and the 700 million poorest humans would win.; Typical Americans would win and the 700 million poorest humans would lose.; Typical Americans would lose and the 700 million poorest humans would win.; Typical Americans would lose and the 700 million poorest humans would lose.

17. [new page] For your information, the expected answer was *Typical Americans would lose and the 700 million poorest humans would win* from the Global climate scheme. Now, here is the second policy:

Now, here is the second policy: **National redistribution scheme:** This policy would **increase taxes on the top 5%** and provide cash transfers to all adults. More precisely, **each American adult would receive \$85 per month** (that is \$1,000 per year). This would be financed by an increase of the federal income tax on household income in excess of \$315,000 per year, leaving taxes unchanged for income below \$315,000. See more details.

18. Who would win or lose financially in the National redistribution?

Three respondents with the expected answer will get \$50 in points.

Typical Americans would win and the richest Americans would win.; Typical Americans would win and the richest Americans would lose.; Typical Americans would lose and the richest Americans would win.; Typical Americans would lose and the richest Americans would lose.

19. [new page] For your information, the expected answer was *Typical Americans would win and the richest Americans would lose* from the National redistribution scheme.

To help you with the next question, here is a reminder of the policies:

Global Climate scheme:

To limit global warming and reach the international climate objective, the Global

climate scheme would **impose a maximum amount of greenhouse gases we can emit globally**.

It would **make polluters pay** for their emissions, which in turn would increase fossil fuel prices and discourage polluting activities.

The revenues would finance a **global basic income** of \$30 per month for all humans, lifting out of extreme poverty the poorest billion people.

Considering the basic income and the fuel price increases, **the typical American would lose out financially \$85 per month**.

National redistribution scheme: This policy would **increase taxes on the top 5%** and provide cash transfers to all adults. More precisely, **each American would receive \$85 per month**. This would be financed by an increase of the federal income tax on household income in excess of \$315,000 per year, leaving taxes unchanged for income below \$315,000 per year.

20. If both the Global climate scheme and the National redistribution scheme are implemented, how would a typical American be financially affected?

Three respondents with the expected answer will get \$50 in points.

A typical American would lose out financially.; A typical American would neither gain nor lose.; A typical American would gain financially.

21. [new page] For your information, the expected answer was that *A typical American would neither gain nor lose* from both schemes combined. Now, here are the last two policies:

Coal exit: To reduce CO2 emissions, this policy would require all U.S. coal power plants to be phased out by 2030. Coal would be replaced by renewable sources like wind and solar panels as well as stronger reliance on gas power plants.

Marriage only for opposite-sex couples:

This policy is a proposed amendment to the U.S. Constitution that would legally define marriage as a union of one man and one woman.

Now, we will ask your opinion on the four policies.

[Click here for the reminder of the first two policies.](#)

22. Do you support the Global climate scheme?

Yes; No

23. According to you, what percentage of Americans answer Yes to the previous question?

The three people who are closest to the true value get \$50 in panel points.

Percentage of Americans in favor of Global climate scheme [slider from 0 to 100]

24. Do you support the National redistribution scheme?

Yes; No

25. According to you, what percentage of Americans answer Yes to the previous question?

The three people who are closest to the true value get \$50 in panel points.

Percentage of Americans in favor of National redistribution [slider from 0 to 100]

26. [Random branch (list_exp)] Beware, this question is quite unusual. Among the policies below, **how many** do you support?

- Global climate scheme
- Coal exit
- Marriage only for opposite-sex couples

0; 1; 2; 3

27. [Random branch (list_exp)] Beware, this question is quite unusual. Among the policies below, **how many** do you support?

- Global climate scheme
- National redistribution scheme
- Coal exit
- Marriage only for opposite-sex couples

0; 1; 2; 3; 4

28. [Random branch (list_exp)] Beware, this question is quite unusual. Among the policies below, **how many** do you support?

- Coal exit
- Marriage only for opposite-sex couples

0; 1; 2

29. [Random branch (list_exp)] Beware, this question is quite unusual. Among the policies below, **how many** do you support?

- National redistribution scheme
- Coal exit
- Marriage only for opposite-sex couples

0; 1; 2; 3

Conjoint analyses

30. Among the two following bundles of policies, which one would you prefer?

Note that for each bundle, all policies of the bundle would be implemented at the same time.

Bundle A	Bundle B
Coal exit National redistribution scheme Global climate scheme	Coal exit National redistribution scheme

Bundle A; Bundle B

31. Do you support Bundle A (combining Coal exit, the National redistribution scheme, and the Global climate scheme)?

Yes; No

32. [new page] [Random branch (conjoint analysis b.)] Among the two following bundles of policies, which one would you prefer?

Note that for each bundle, all policies of the bundle would be implemented at the same time.

Bundle A	Bundle B
Coal exit National redistribution scheme	Global climate scheme National redistribution scheme

Bundle A; Bundle B

Donation lottery

40. Please select “A little” (this is a test to see if you are paying attention).

Not at all; A little; A lot; A great deal

41. [Random branch (donation)] By taking this survey, you are automatically entered into a lottery to win \$100 in panel points. This lottery is unrelated to the previous ones that rewarded answers’ accuracy. In a few days you will know whether you have been selected in the lottery. The payment will be made to you in the same way as your compensation for this survey, so no further action is required on your part.

Should you be selected in the lottery, you can also donate a part of this additional compensation to American people living in poverty through the charity GiveDirectly. The charity GiveDirectly provides small amounts of cash to people in need in the U.S.

In case you are winner of the lottery, what share of the \$100 would you donate to American people living in poverty through GiveDirectly?

Amount donated to American people in need (in \$) [slider from 0 to 100]

42. Please select “A little” (this is a test to see if you are paying attention).

Not at all; A little; A lot; A great deal

43. [Random branch (donation)] By taking this survey, you are automatically entered into a lottery to win \$100 in panel points. This lottery is unrelated to the previous ones that rewarded answers’ accuracy. In a few days you will know whether you have been selected in the lottery. The payment will be made to you in the same way

as your compensation for this survey, so no further action is required on your part.

Should you be selected in the lottery, you can also donate a part of this additional compensation to African people living in poverty through the charity GiveDirectly. The charity GiveDirectly provides small amounts of cash to people in need in Africa.

In case you are winner of the lottery, what share of the \$100 would you donate to African people living in poverty through GiveDirectly?

Amount donated to African people in need (in \$) [slider from 0 to 100]

Petition

44. Would you be willing to sign a petition for the Global climate scheme?

As soon as the survey is complete, we will send the results to the U.S. President's office, informing him what share of American people are willing to endorse the Global climate scheme. (You will NOT be asked to sign, only your answer here is required and remains anonymous.) *Yes; No*

45. Would you be willing to sign a petition for the National redistribution scheme?

As soon as the survey is complete, we will send the results to the U.S. President's office, informing him what share of American people are willing to endorse the National redistribution scheme. (You will NOT be asked to sign, only your answer here is required and remains anonymous.) *Yes; No*

Other policies

46. The following policies are discussed at international negotiations on how to deal with climate change.

Do you support or oppose the following policies?

- Payments from high-income countries to compensate low-income countries for climate damages
- High-income countries funding renewable energy in low-income countries

- High-income countries contributing \$100 billion per year to help low-income countries adapt to climate change

Strongly oppose; Somewhat oppose; Neither support nor oppose; Somewhat support; Strongly support

47. Do you support or oppose the following global policies?

- Cancellation of low-income countries' public debt
- Democratise international institutions (UN, IMF) by making a country's voting right proportional to its population
- Removing tariffs on imports from low-income countries
- A minimum wage in all countries at 50% of local median wage
- Fight tax evasion by creating a global financial register to record ownership of all assets
- A maximum wealth limit of \$10 billion for each human

Strongly oppose; Somewhat oppose; Neither support nor oppose; Somewhat support; Strongly support

48. Currently, 0.4% of U.S. government spending (that is, 0.2% of U.S. GDP) is spent on foreign aid to reduce poverty in low-income countries.

Do you support the U.S. transferring more money to low-income countries?

Yes, U.S. foreign aid should be increased.; Yes, but only if some conditions are met.; No, U.S. foreign aid should remain stable.; No, U.S. foreign aid should be reduced.

49. [Asked only if *Yes, but only if some conditions are met.* is chosen] What conditions should be required for the U.S. to increase its foreign aid? (Multiple answers possible)

That recipient countries comply with climate targets and human rights.; That recipient countries cooperate to fight illegal migrations.; That other high-income countries also increase their foreign aid.; That this is financed by increased taxes on millionaires.; That we can be sure the aid reaches people in need and money is not diverted.; Other: [open field]

50. [Asked only if *No, U.S. foreign aid should remain stable.* or *No, U.S. foreign aid should be reduced.* is chosen] Why do you oppose the U.S. increasing its foreign aid? (Multiple

answers possible)

Aid perpetuates poverty as it makes people feel less responsible for themselves.; Aid is not effective as most of it is diverted.; Aid is a pressure tactic for high-income countries that prevents low-income countries from developing freely.; The U.S. is not responsible for what happens in other countries.; Charity begins at home: there is already a lot to do to support the American people in need.; Other: [open field]

Values and politics

51. In international climate negotiations, would you prefer U.S. diplomats to defend U.S. interests or global justice?

U.S. interests, even if it goes against global justice; U.S. interests, to the extent it respects global justice; ndifferent or don't know; Global justice, to the extent it respects U.S. interests; Global justice, even if it goes against U.S. interests

52. How much did you give to charities in 2022?

I did not make donations to charities last year.; Less than \$100.; Between \$101 and \$500.; Between \$501 and \$1,000.; Between \$1,001 and \$5,000.; More than \$5,000.

53. To what extent are you interested in politics?

Not at all; A little; Moderately; A lot; A great deal

54. Where would you rate yourself on a scale of 1 to 5, where 1 means you think the government should do only those things necessary to provide the most basic government functions, and 5 means you think the government should take active steps in every area it can to try and improve the lives of its citizens?

Desired involvement of government [slider from 1 to 5]

55. **On economic policy matters**, where do you see yourself on a scale of 1 to 5, where 1 is Left (favoring equality and government interventions) and 5 is Right (favoring free competition and little government intervention)?

Left (1) to Right (5) on economic issues [slider from 1 to 5]

56. Did you vote in the 2020 U.S. presidential election?

Yes; No: I didn't have the right to vote in the U.S.; Prefer not to say

57. [Asked if voted] Which candidate did you vote for in the 2020 U.S. presidential election?

Biden; Trump; Jorgensen; Hawkins; Prefer not to say

58. [Asked if did not vote] Even if you did not vote in the 2020 U.S. presidential election, please indicate the candidate that you were most likely to have voted for or who represents your views more closely.

Biden; Trump; Jorgensen; Hawkins; Prefer not to say

59. To what extent do you think the following issues are a problem?

- Income inequality in the U.S.
- Climate change
- Global poverty

Not an important issue for me; An issue but there are other priorities; An issue but we already do what we can; An important issue, we should do more; One of the most pressing issue of our time

60. What group do you defend when you vote?

Sentient beings (humans and animals); Humans; Americans; People sharing my culture or religion; My State; My town; My relatives and/or colleagues; My family and myself

Prioritization

61. In this question, you have 100 points that you can allocate to different policies. The more you give points to a policy, the more you support it.

How do you allocate the points among the following policies?

You can adjust the number of points either using the slider or entering the number of your choice on the right-hand-side. **The sum of points must equal exactly 100.** By pushing the last slider to the right, the total will automatically adjust to 100. Please read the 6 options before making your choice.

- Student loan forgiveness
- \$15 minimum wage

- Universal childcare/pre-K
- Funding affordable housing
- Expanding the Supreme Court
- Handgun ban
- Making abortion a right at the federal level
- Coal exit
- Trillion dollar investment in clean transportation infrastructure and building insulation
- Ban the sale of new combustion-engine cars by 2030
- National redistribution scheme
- Wealth tax
- Increase corporate income tax rate from 21% to 28%
- Global climate scheme
- Global tax on millionaires
- Global democratic assembly on climate change
- Doubling foreign aid

[slider from 0 to 100]

Feedback

62. Do you feel that this survey was politically biased?

Yes, left-wing biased; Yes, right-wing biased; No, I do not feel it was biased

63. The survey is nearing completion. You can now enter any comments, thoughts or suggestions in the field below.

[open-ended field]

64. Lastly, are you interested to be interviewed by a researcher (through videoconferencing) for 30 min?

This is totally optional and will not be rewarded.

Yes; No
