Dear Dr. Yan,

I am hereby submitting the paper, "International Attitudes Toward Global Policies," co-authored with Thomas Douenne and Linus Mattauch.

Although recent studies show widespread willingness to contribute to climate action around the world (Andre et al., *NCC*, 2024);¹ climate policies coordinated at the global level remain understudied. Except for Carattini, Kallbekken & Orlov (2019),² published as a Comment in *Nature*, little research delves into this critical areas. Our study addresses this gap using representative surveys in 20 countries over 48,000 respondents.

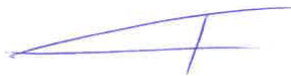

Our surveys reveal strong and genuine support for global carbon pricing worldwide. It points to an overlooked property of climate policies redistributive at the global level: they can be supported by majorities, even in countries bearing the burden.

These findings have far-reaching implications for global policy dialogues, such as UNFCCC COP negotiations. These research results could potentially reshape international policy discussions.

We would like to exclude Stefano Carattini, Kenneth Scheve and Michael Bechtel from a set of potential reviewers.

Sincerely,

Dr. Adrien Fabre
